• can understand main points of both concrete and abstract topics
• interaction with a degree of fluency
• able to explain a point of view

ADVANCED
• can express themselves fluently and spontaneously
• able to produce clear and detailed text on complex subjects
THE CASE

- 1/3 of the customers of Skills Centre are interested in jobs at health and education sector
  - Many are aiming to vocational education (practical nurse)
- OSKE provides 5,5 month of training which increases customers’ expertise and capabilities in the field
- Regardless of the increase in skillset, the language skills do not always develop enough allowing the customer to apply for vocational qualification studies.
  - Requirement of B1 at all sectors
  - Often the oral language skills are B1 whereas the written language skills are lower
- Both OSKE and Omnia recognise the strengthening of field specific know-how despite the lack of language skills.

-> Pilot to start in a practical nursing vocational education at language level A2+ offered to customers who have completed training provided by OSKE.

29 June, 2022
TRAINING AT OSKE

- Customers participated in OSKE’s vocational training for health and education. The training included:
  - Basic studies (7 weeks): Finnish language, mathematics and IT skills among other things
  - Vocational competence: professional language, working life skills, parts of vocational units
  - 7 weeks of practical period in a nursery, school or a nursing home
- The customers had a chance to familiarize themselves with Omnia’s practical nursing qualification
- During the training, the customers were able to receive multiprofessional services like career counselling and support from business coordinators
THE TRANSITION FROM OSKE TO VOCATIONAL EDUCATION

- The student’s know-how, motivation and readiness for vocational education were evaluated in OSKE at the end of training.
  - The minimum language requirement at all sectors was A2+
- The decisions for education were based on test results.
  - Omnia made the final decisions based on OSKE’s presentation
- OSKE organised an orientation period in the beginning of the education to provide a smooth transition for the students.
- To guarantee a good start the teachers from OSKE and the vocational education made sure all the relevant information for the support of the student was shared.
- If needed, OSKE’s careers counsellors were also available to provide support during the beginning of the education.
WHAT WERE THE OUTCOMES?

- 18 extremely motivated students started at the vocational education
- Finnish as a second language teacher participated during the first 6 months in almost all of the units
- Tailored common units (mathematics and science competence, communication and interaction competence, Finnish as a second language, citizenship and working life competence, social and cultural competence)
- The language skills have improved and almost all of the students are still participating in studies. One student changed their plans and one dropped out.
- The students will transfer to work-based learning in autumn.
OBSERVATIONS

- Thanks to OSKE’s training, the students have received information about the field and studies
  - strong motivation for the health and education roles
  - compensates lack of language skills
- The customers who participated in the pilot benefitted from personal guidance and coaching both in OSKE as well as in vocational education.
- The effect of the language support was significant
  - During the pilot 6 months of intensive support
  - It is important to evaluate what is the required level of language support in order to maintain quality of service
- Next group will start in August 2022
