

# Ready for the 'three I's process'

*Thursday, 11:30 – 13:00 CEST*

# The BILT Self-Reflection Tool for TVET providers - WHAT

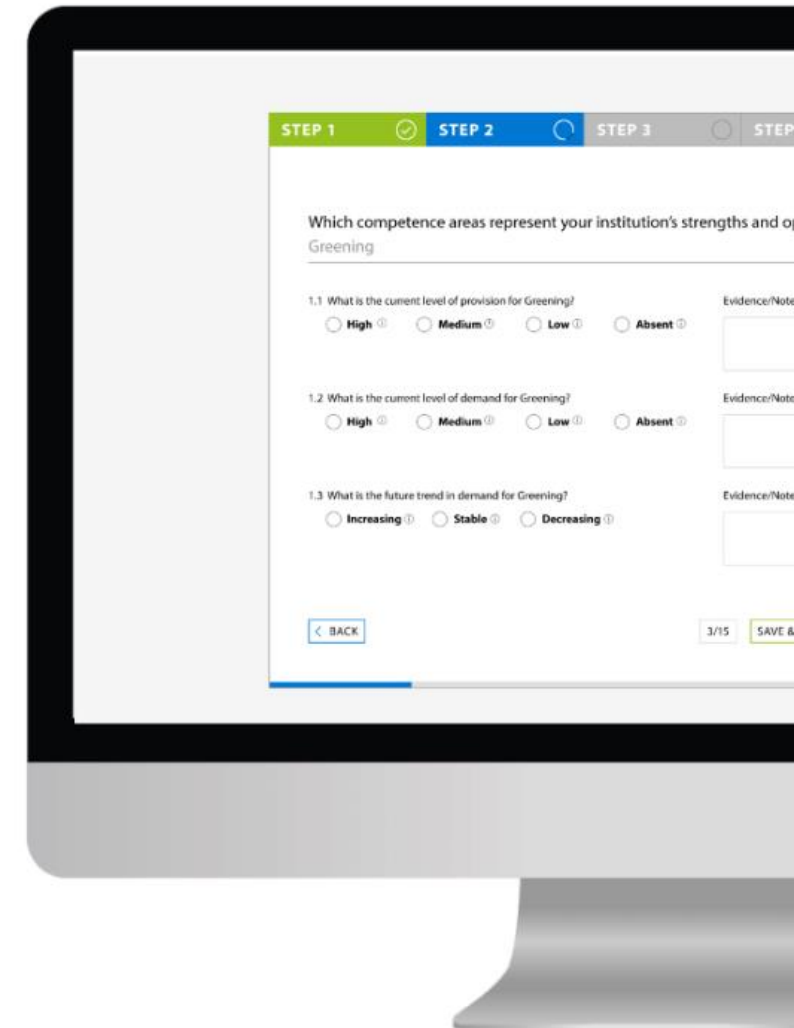

## What is it?

- (not just) the L in 'BILT'
- A process of self-reflection for TVET providers, supported by a web-based tool
- Based on the findings from the 'New qualifications and competencies for future-oriented TVET systems' publication, especially those set out in volume three.

**Identification** >> Identifying new qualifications and competencies in a timely and accurate manner

**Integration** >> Integrating them into appealing and flexible curricula and training regulations

**Implementation** >> Implementing them in innovative training approaches

# The BILT Self-Reflection Tool for TVET providers – WHY

## What are the benefits?

Some expected short-term benefits from the process for the TVET institution:

- Evidence based assessment of their capacity to identify, integrate and implement new qualifications and competencies;
- Engagement in a structured self-reflection process with the active participation of managers, teachers, learners and external partners;
- Capacity to capture evidence of the institution's strengths and opportunities in addressing new qualifications and competencies as a basis for sustained improvement in institutional performance.

The longer-term benefits for the TVET community:

- Sustained institutional improvement among TVET providers
- Enhanced role and influence of TVET providers in identifying, integrating and implementing qualifications and competencies at local and system levels

# The BILT Self-Reflection Tool for TVET providers - HOW

- The SRT proposes structured steps of self-reflection with their distinctive objectives.
- The user guide explains how to organize the process within TVET institutions, who should contribute, as well as the estimated timings.
- The guidance also includes suggestions on how to analyse the outcomes from each step, and how to move from one step to the next.
- This analysis is facilitated by the SRT web-based tool, which captures and processes data in real time.
